Document Retrieval Functionality

The document retrieval functionality will be included in the software patch that will be implemented in DTS on July 24, 2010.

I. FREQUENTLY ASKED QUESTIONS

1. What is the purpose of the Restore Purged Documents functionality?

   DTS documents are migrated to a secondary storage location (also known as “purged”) after a 15 month period of inactivity and other qualifying conditions are met. DTS documents may need to be restored from the secondary storage location if a traveler needs to access the document to support a travel claim audit, investigation, or complete an amendment. This new feature allows travelers/users to instantly access DTS documents that have been purged without submitting a help desk ticket to the Travel Assistance Center.

1. How does the traveler access the new Restore Purged Documents screen?

   From the DTS User Welcome screen, mouse over Official Travel from the menu bar (Figure 1). Select Restore Purged Documents from the drop-down list to open the Purged Trip Documents screen (Figure 2).

2. How is a purged document restored?

The Purged Trip Documents screen will display a list of all purged documents. Select the **restore** link to retrieve all adjustment levels of the authorization, voucher, local voucher and/or group authorization (including substantiating records) associated with the selected document. When the document is restored, the **Restore Trip Documents** screen will refresh and the document will no longer appear in the list. The document will be restored to the user/traveler’s Authorization/Orders screen or the Vouchers screen. Select the **View** button for Authorizations/Orders, Vouchers, Local Vouchers, or Group Authorizations to access the document.

3. Who can restore a traveler’s purged documents?

Anyone with access to the group of which the traveler is a member will be able to access and restore purged documents. This would include DTS users who typically have group access such as travel clerks, non-DTS Entry Agents (NDEAs), and Defense Travel Administrators (DTAs).

4. How would an authorized user access a traveler’s purged documents?

From the DTS Welcome screen, mouse over **Official Travel - Others** on the menu bar. Select **Restore Purged Documents** from the drop-down list to open the Purged Trip Documents screen (Figure 3). When the Traveler Lookup screen opens (Figure 4), complete one of the following fields: Traveler SSN, Last Name, or Last Name and First Name. Please note that the option to search by TANUM is grayed out and cannot be used at this time. Select **Search** to view the list of purged documents for that traveler.
